

KRUSHNA MENDHULE

MBA Candidate | DevOps Engineer — AWS Cloud & CI/CD Automation

krushnamendhule11@gmail.com | +91 86052 04149

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience designing CI/CD pipelines, deploying cloud-native infrastructure on AWS, and embedding DevSecOps practices into the software delivery lifecycle. Proficient in automation, containerization, and secure production deployments, with a track record of reducing manual effort and improving release reliability. Pursuing an MBA to complement technical expertise with strategic business acumen, aiming to drive technology-led operational efficiency.

TECHNICAL SKILLS

- CI/CD Pipelines (Jenkins)
- Docker & Containerization
- Infrastructure Automation
- Linux & Shell Scripting
- AWS Cloud Services
- DevSecOps Practices
- Git & Version Control
- Multi-cloud & DevOps

TECHNICAL PROJECTS

Serverless Web Application Project

- Designed and deployed a serverless web application using API Gateway, AWS Lambda, DynamoDB, and S3.
- Implemented secure frontend hosting with S3 and CloudFront, integrated with ACM certificates, WAF, and Route 53 DNS.
- Focused on scalability, security, and cost optimization while ensuring a seamless user experience.
- Leveraged a pay-per-use, serverless architecture to eliminate idle infrastructure costs and simplify scaling.

DevSecOps CI/CD Pipeline with Jenkins

- Built an end-to-end CI/CD pipeline using Jenkins, automating build, test, security scanning, and deployment stages.
- Integrated static code analysis and vulnerability scanning into the pipeline to embed security checks early in the DevSecOps workflow.
- Automated Docker image builds and deployments to AWS, reducing manual intervention and deployment time.
- Configured Git webhooks to trigger pipeline runs automatically on code commits, enabling continuous integration.
- Defined pipeline stages as code (Jenkinsfile) for version-controlled, repeatable, and auditable build processes.

Production-Grade Full-Stack Application Deployment

- Deployed a production-grade full-stack application on AWS with load-balanced, auto-scaled compute infrastructure.
- Configured EC2/ECS for application hosting, RDS for the database layer, and S3 for static asset storage.
- Set up centralized monitoring and logging using CloudWatch to enable proactive issue detection and faster resolution.
- Integrated the deployment workflow with Jenkins CI/CD for automated, repeatable releases to production.
- Applied IAM roles and security groups to enforce least-privilege access across the deployed infrastructure.

EDUCATION

BCA – Bachelor of Computer Applications | KKSU, Ramtek

MBA (Pursuing) | TIST College, Hinganghat

CERTIFICATIONS

- DevOps and AWS Cloud Certification

KEY ACHIEVEMENTS

- Delivered three end-to-end cloud and DevOps projects spanning serverless architecture, CI/CD automation, and production-grade deployment.
- Earned a DevOps and AWS Cloud certification covering hands-on labs in automation, cloud services, and security fundamentals.
- Applied DevSecOps principles to embed security checks directly into the CI/CD pipeline rather than as a post-deployment step.

ADDITIONAL SKILLS

Tally ERP 9 • MS Excel & Data Entry • Team Collaboration • Communication & Presentation Skills
